

Rapport individuel de Projet Long à l'itération 3

« Simulation de systèmes routiers »

Guohao DAI, Groupe EF - 5

Première année - Département Sciences du Numérique

2020-2021

A brief introduction of this iteration:

In this iteration, my colleagues and I continue to work for the user interface part of this project.

We link various elements in the user interface with the underlying code, and can create a new simulation through the user interface. As shown in Figure 1.

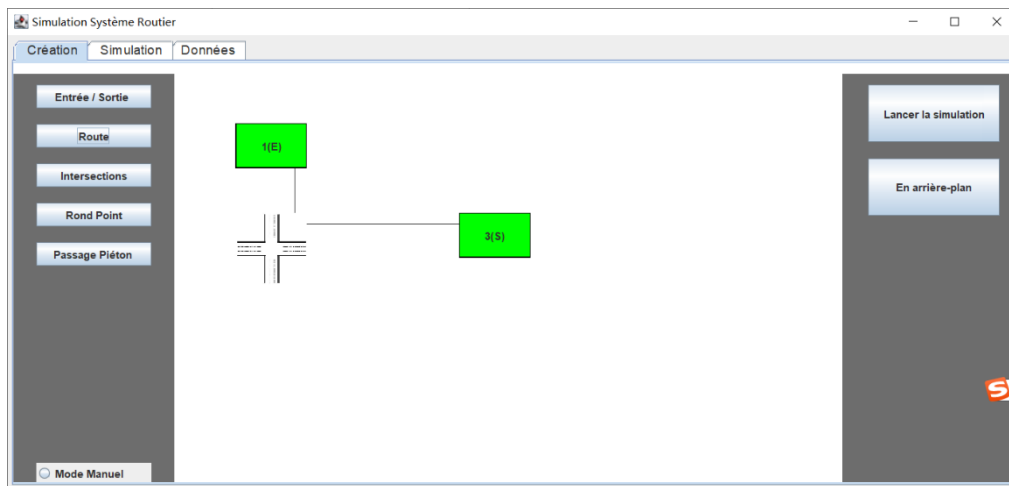

Figure 1 : The first version of user interface.

In addition, another classmate of our group, Ahmed, and I, we researched and tested another way to link each node by clicking the mouse to link each element added by the user into a network that can be simulated. As shown in Figure 2.

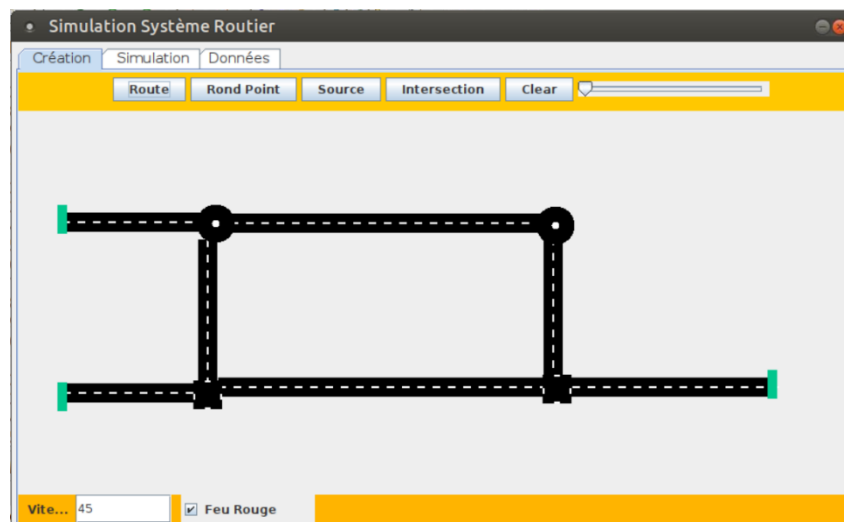

Figure 2 : The new version of user interface.
